

Patent Application of Brace Beemer Daniel, David Arturo Salazar,
and Robert Sinclair Daniel III for "Agitation of Poultry by Applied
Robotics" continued - Page 19

ABSTRACT OF THE DISCLOSURE

An adaptable and configurable automated, trackless, and self-propelled robot system for agitating the poultry within the corrosive environment of a poultry house. Use of our system will help to maximize poultry growth-to-feed-consumed ratios, as well as save time, effort, and expense for poultry farmers agitating their birds by walking them or having them walked.
